

The FUSION Partners

FUSION ENHANCE has been developed by leading industry companies that have timber at their hearts.

DRESSER MOULDINGS

DRESSER has been supplying the timber trade with the highest quality timber mouldings for over 35 years. Their experience and knowledge has been incorporated into the FUSION ENHANCE cladding designs to ensure optimum performance. DRESSER also has the latest coating application technologies to provide the fully finished cladding products.

ARCH TIMBER PROTECTION

ARCH has been pioneering timber protection technologies for over 80 years. Its range of proven fire retardant impregnation treatments have been used with real confidence on construction projects around the world for more than 30 years and are approved fire retardants products of the UK Wood Protection Association. DRICON is the only BBA accredited fire retardant protection for timber.

Timber Cladding

fusion
endure High Performance
Timber Cladding

Developed through a unique combination of timber industry leading companies, **fusion enhance** is a high performance simple to specify, interior timber cladding system - with built-in fire protection and colour options.

Any internal timber cladding profile of your preference

Built-in DRICON long term fire protection

Choice of 16 standard and fashionable opaque, semi-opaque and translucent coatings^

Cladding Profiles

For interior projects FUSION ENHANCE can be applied to your own timbers or alternatively timbers supplied by DRESSER MOULDINGS, to ensure premium in-situ performance and style. Although the FUSION ENHANCE system is designed primarily for interior cladding applications, it can be used for exterior projects where required. However these exterior projects will require a professional and regular coating maintenance cycle to maintain the fire retardant properties of the timber. Please contact DRESSER MOULDINGS for advise on these factors including cladding profile selection.

Built-In Fire Protection

Building Regulations will often demand an effective fire protection for timber claddings used in construction projects. Before a decorative coating is applied, FUSION ENHANCE timber claddings have a built-in fire retardant protection added - tried, tested and trusted DRICON fire retardant from industry leaders in timber protection technologies, ARCH TIMBER PROTECTION. This is applied through a controlled pressure impregnation treatment to provide a Euroclass B surface spread of flame protection to the timber claddings. A humidity resistant fire protection that will last the lifetime of the timber. DRICON is the only BBA accredited fire retardant treatment for the protection timber.

High Performance Decorative Coatings

The FUSION ENHANCE system incorporating DRYWOOD FIRESTAIN from DRYWOOD COATINGS, offers the choice of 16 standard opaque, semi-opaque and translucent water based decorative finishes.^ Specially developed to maintain the built-in fire protection of the timber claddings, these high performance coatings are factory applied in controlled conditions to give a professional, durable and easy to maintain colour choice for any project.

Before you specify your cladding, it is advisable to obtain a FUSION ENHANCE sample profile with your desired colour and finish applied so you can see a true representation of the finished product. We are happy to provide this service at a charge of approximately £45 which is refundable if an order is placed. Simply contact your FUSION ENHANCE representative at Dresser Mouldings - see back page for details.

Coating Maintenance

The correct maintenance of FUSION ENHANCE timber cladding is vital in terms of its long term fire performance - maintenance specifications are available, please ask for more details. If you have chosen to use FUSION ENHANCE claddings for an exterior application it MUST HAVE an appropriate and regular maintenance programme, according to the manufacturer's recommendations, to ensure the fire protection properties are retained.

If you DO NOT intend to maintain the coating for exterior applications we suggest using our **FUSION ENDURE** cladding system, which does not require coating maintenance to retain the fire protection properties of the claddings.

IF FIRE PROTECTION IS DEMANDED, IT IS THE SPECIFIERS' RESPONSIBILITY TO ENSURE THE CORRECT INSTALLATION.

^ More colour choices are available. Please ask for details.
